
Basic features
Special features
Task tokens
$\mathbf{f}_1^t$
$\mathbf{f}_N^t$
Task execution time features
Average execution time of Task 1
Std. of Task 1's execution time
Minimized execution time
Maximum execution time
DAG structural features
In-degree of Task 1
Out-degree of Task 1
Levels in DAG of Task 1
Positional encoding
Sine function values of Token 1
Cosine function values of Token 1
Communication time features
Average communication time of Task 1's precedent tasks
Average communication time of Task 1's subsequent tasks
High-level scheduling features
Minimized completion time
Rank values via HEFT rule
Those of Task N
Processor tokens
$\mathbf{f}_1^p$
$\mathbf{f}_M^p$
Processor executing time features
Average execution time of Processor 1
Std. of Processor 1's execution time
Minimized execution time
Maximum execution time
Positional encoding
Sine function values of Token N+1
Cosine function values of Token N+1
Padding tokens
Padding token
Those of Processor M
Global token
$\mathbf{f}^g$
Total number of tasks
Total number of processors
Edge density factor
Average execution time
Std. of execution time
Average communication time
Std. of communication time
Padding token
